

SUBJECT: ACCOMPLIANCE TO REACH REGULATION

Melegnano, 07/09/2021

Dear Customer,

On June 1st 2007, came into force the REACH Regulation, which governs the registration, evaluation and the usage of chemicals, circulating in the European Community.

According to REACH, the companies who manufacture or import these substances, pure or contained in a mixture, that exceeds one ton per year, should register them on the agency of the European Chemicals, in compliance with the terms and conditions indicated in the standard itself.

Our company does not manufacture or import chemical substances or mixtures.

The products in brass or aluminum sold by our company are the only ones that could contain Pb exceeding 0,1%. For these items, we have carried out a request of additional details.

For all the other items sell by our company, in particular to the ones in stainless steel, we don't manufacture or import goods containing substances included in the list of "**Substance of Very High Concern**" (SVHC) <https://echa.europa.eu/candidate-list-table> nor we produce or import items, that release intentionally such substances, during their implementation.

Furthermore, our company does not deal or use professionally chemical substances or mixtures.

We constantly monitor the SVHC-list and, if necessary, we will inform you about eventual new chemicals used and inserted into the list; beyond the aforementioned-Pb (only for brass and aluminum).

Based on the documentation that we receive from our suppliers; we will update the safety data sheets and will provide you the proper ones.

Regards

FIMINOX SPA
